# **QUALITY and SAFETY POLICY**

## Field of application

Design and construction of compressors, hydraulic breakers, minitransporters and road vehicles for construction

The General Management of ROTAIR SpA, in relation to the activities carried out both inside and outside the company structure, establishes the following for the Quality and Safety Management System, described in the Company context and in the relevant Procedures, following targets:

#### Quality area

- a) respect the values of the parent company ELGI
- b) concentrate their efforts on the implicit and explicit needs of the Customer, to ensure their full satisfaction and be the supplier of reference every day;
- c) determine the risks that need to be faced and the opportunities to be seized to ensure that the System can achieve the expected results, preventing possible situations of noncompliance and / or dissatisfaction of internal and external customers and increasing the effects desired by management;
- d) compliance with current quality regulations (Directive 2006/42 / EC, Directive 2000/14 / EC, Directive 2014/68 / EU, Directive 2007/46 / EC)
- e) identify innovative and advanced methodologies and services, which allow to minimize product costs, adapting to technological development and market demands in a climate of constant collaboration with the customer;
- f) strengthening and expansion of the international sales network thanks to the inclusion of a sales manager;
- g) optimize the production process with interventions that limit wasted time in processing changes, reorganizing the work areas with the provision of new equipment and making room extensions and structural changes;
- h) possibility of expanding the company workplaces, in order to optimize and enhance the various production phases
- i) possibility of entering the market with specific portable motor-compressors built ad hoc to meet the current demands of our international customers;

#### **Security Area**

- a) Maintain work standards that comply with legal requirements relating to the health and safety of the workplace
- b) The choice of measures adopted for the elimination / reduction of risks takes into consideration, where applicable, the following hierarchical order:
  - $\checkmark~$  Elimination of the source of danger
  - ✓ Replacing what is dangerous with what is not dangerous or less dangerous
  - ✓ Technical measures (e.g. isolation of the area exposed to danger, safe management of electricity, etc.)
  - ✓ Organizational measures (e.g. shifts of exposed personnel, specific training for exposed personnel, access regulation in certain areas, etc.)

This document is the property of ROTAIR and cannot be reproduced or shown to third parties without the written permission of ROTAIR

- ✓ Posting of safety signs, notices
- ✓ Specific work procedures or instructions
- ✓ Use of Personal Protective Equipment (PPE)

In this sense, the General Management undertakes to:

- spread the culture of quality and safety throughout Rotair SpA;keep the Quality and Safety Management System active in compliance with UNI EN ISO 9001: 2015 and OHSAS 18001: 2007 standards;
- 2. ensure an adequate level of competence and knowledge of resources, through targeted training courses and information systems for the integrated management of processes;
- 3. involve staff at all levels in the constant application of the Quality and Safety Management System;

ROTAIR SpA, therefore, considers its Quality and Safety System as the most effective tool for achieving the involvement of personnel and the improvement of its processes. Furthermore, the organization bases its operational choices on the principles of fairness towards the customer, seriousness in providing its services and compliance with all contractual, legislative and regulatory requirements.
